Reich-Speak for physicists

Green Wave in “Desert Greening” shall make the desert fertile

Greening the desert is an old dream of the North Africans, which could now become reality thanks to the “Desert Greening” project of the Algerian Madjid Abdellaziz, who uses near-natural technologies and has already achieved astonishing successes with them in the Algerian desert. Following on from his article “Understanding Radioactivity” in issue 172 of *raum&zeit*, Harald Kautz-Vella describes Abdellaziz’s further plans, which could finally bring peace to the oppressed continent.

By Harald Kautz-Vella, Prignitz

Djanan is a place in the south of Algeria, near El Haouita/Laghouat. In Djanan, a settlement is being built – not one of the postmodern zero-emission cities as they are being raised with oil money on the Arabian Peninsula. Djanan is the nucleus and the future centre of an agricultural settlement area in which man and nature are to live in balance with each other, in a pros-

pecture, the lack of relationship of the blocks to their rural surroundings, one gets a feeling for the essence and scope of this regional development project. The story began in 2003, when the Algerian-born Madjid Abdellaziz, after studying engineering in Berlin, decided to tackle the rampant drought in Algeria with a private project. He did not use the school knowledge he

There is no need for long discussions about the method; the results speak for themselves: 30-metre increase in the groundwater level since 2004.

Africa

perity that grows directly from paradise-like garden landscapes. The buildings and housing estates are oriented on the Golden Section and unfold their space like the nautilus snail unfolds its shell.

Basically, the whole thing should cost very little. Buildings are made with earth bags – nylon bags filled with earth, or with the natural stone that is produced when the soil is reclaimed. If one contrasts the lack of ideas and stylistic robber barons of post- and post-post-modern archi-

had acquired at the Berlin university, but rather the private contacts with representatives of the “New Physics”, which put him on the road to this project. While in Germany researchers such as Nikola Tesla, Walter Russell, Wilhelm Reich or Viktor Schauberger are still regarded as best ones, whose theories are after all “not proven”, Abdellaziz set about implementing – and combining – precisely their concepts with near-natural technologies. Madjid Abdellaziz: “*The cloudbuster, the rainmaker ins-*

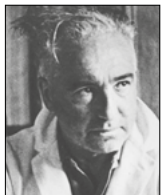

trument developed by Wilhelm Reich, needs running water or a large lake to be grounded. We don't have both in southern Algeria, so we take a small pool and revitalize the water freely according to Schauberger, with swirls, and with pyramid geometry”.

Impressive successes

There is no need to discuss the method at length, as the results speak for themselves: 30 metres of growth in the groundwater table since 2004; a collapse in the price of the lion or

Weather manipulation with orgone technology

The Austrian psychologist Wilhelm Reich discovered and researched the subtle life energy, which he called orgone. In other times and cultures it is known as Chi, Prana or Od. Reich found that orgone did not obey the law of entropy,

**Wilhelm Reich (1897-1957)
Discoverer of the “orgone”.**

but on the contrary tended to concentrate. Especially phase transitions of metal and insulator materials like glass, mineral or cotton attract orgone. Reich called the harmful variant of orgone “deadly orgone”, abbreviated DOR. When DOR accumulates in the atmosphere, there is no longer a natural flow of energy between sky and earth. The consequences can be weather extremes like droughts. Reich's Oranur experiment became famous, in which he equipped an orgone accumulator with radioactive radium and thus generated DOR. Numerous negative consequences such as symptoms of radiation sickness in humans and a hazy grey veil in the sky occurred. Conversely, the orgone technology can also be used for integral environmental healing.

The so-called cloudbuster, for example, an invention of Reich, sucks off DOR and conducts this energy into a water reservoir. Orgone then flows in and improves the climate. Madjid Abdellaziz has demonstrated for all to see that this natural technology can be used to green the desert.

The “Cloudbuster” stimulates the natural energy flow between sky and earth.

At the top: Cloudbuster and cloud stabilizer work as a team. The latter fixes the created microclimate and keeps it stationary. A mobile cloudbuster is used for operations that are to have a more expansive effect. Above: After “celestial acupuncture”, an exotic-looking fractal field often unfolds in the sky.

desert truffle from 80 to 8 euros a kilogram; a lively microclimate within a radius of 150 kilometres; clear nights; nature in bright colours with a rather Mediterranean attitude to life; occasional rains at the height of summer. Let's put it to the test. Between July 5 and 15, weather operations with Reich technology were carried out in Djanan. Today is 20th July, 17.00 hrs. Let's take a look at

the weather in El Haouita, the settlement closest to Djanan (see figure). Before the beginning of the “celestial acupuncture”, as Abdellaziz also calls it, in 2003, the region knew only this misty oppressive atmosphere at high pressure and the black DOR (Deadly Orgon) clouds at low pressure, which in some years did not bring rain even in winter. True to the motto *“Nothing is more convincing than an invention that you use enthusiastically yourself”*, Djanan is

a family project. Madjid Abdellaziz brought the technology to Algeria, the basic financing for the acquisition of the land rights came from the modest family fortune. The agriculture is run by the family of Maya Abdellaziz, his wife, who has her roots near Laghouat. Her niece, the 23-year-old architecture student Isra Belalmi, designed the architecture for the extended settlement project, which is primarily intended to create living space for the agricultural workers, but also to house a school for desert greening. The project was presented as a diploma thesis in mid-July and was accepted with distinction by the University of Laghouat.

Before the origin of “Celestial acupuncture” [...] in 2003 the region knew only this misty, oppressive atmosphere at high pressure and the black DOR clouds at low pressure, which in some years did not even bring rain in winter.

Africa – continent of the future

When Africa comes into the media, it is usually the most frightening thing. 13 million are threatened with starvation in East Africa; so far three hundred thousand refugees and officially 10,000 dead as a result of NATO's war against Libya. What is hardly visible through the glasses of the Western media is that here lies a birth process in the barrage of the Western elites: The birth of a rich, sparsely populated, innovative continent whose inexhaustible resources threaten to slip out of the control of the Western world. Oil as a motif is almost anachronistic here. Water and arable land are the coming motif, which has hardly been publicly addressed so far. Libyan leader Gaddafi was on the verge of developing an underground freshwater reservoir the size of half of Europe, worth 58 trillion euros, and turning North Africa into a thriving continent, and this – what an affront! – without taking out a loan from the World Bank or hiring Western companies. What the European elites do not want to see, and the European public must not see, is that we Europeans are discrediting ourselves to the

point of blood even in the long term with the gunboat policy that we practice. If the manipulation no longer works and the principle of control escalates, the loss of control is very near. And after that? How wonderful it would have been if the overpopulated Europe, as a respected trading partner, had been able to cover its food requirements in the future in the greening Northern Sahara! To expect recognition of the sovereignty of other states, or at least some moderation from our increasingly paranoid power elites, would be risky. What we can do, however, is to weave the bond between the continents at the lower level – from the middle class and research to accompany the building forces on the black continent and – perhaps an even greater lesson in humility – to learn from them. This is our power (HKV)

Vastu in the desert

The university professors didn't need to know that the entire architecture is based on ancient Indian knowledge of sacred geometry – officially it's an ecological settlement project. Vastu is the Indian variant of Chinese Feng Shui, which is better known in this country, and refers to the ancient Vedic art of designing rooms and buildings in such a way that they have a positive, energizing effect. There are rooms for rest and contemplation, but also places of power and inspiration, all oriented on the golden section and perfected according to natural, resonant sizes and lengths. The European master builders of the cathedral were the last in our country to pass on the ancient Vedic knowledge in their secret societies. For them, it was not only the feeling of holiness they wanted to breathe into their churches and cathedrals, but also a law of stability that could not be calculated with ordinary statics, something that made the buildings last for centuries, in some cases even millennia. The merging of old and new knowledge is typical of the whole project. Making rain according to Wilhelm Reich, water regeneration according to Schauberger, revitalization of the soil with Agnihotra, another old Vedic cultivation

technique, in between elements of traditional agriculture, but also more recent developments like Sonic Bloom, where plants and seeds are refined with special tones, or methods of electrophysical growth acceleration. To date, several hectares of fruit tree plantations have been created, one hectare of vineyards, rows of casuarina trees as wind shelters, and in between, experiments with potatoes, wheat, lettuce and artichokes. Two wells were drilled for irrigation, a small dam was built to collect the abundant rainwater, prevent flooding and keep the water ready for agriculture.

“And it's all organic”, says Madjid Abdellaziz happily, knowing full well that the tribes in the south are unlikely to have heard that something like this is certified in other parts of the world and traded at high prices. “They've noticed, people still have a sense of quality food here. The potatoes at the markets were bigger, and yet, they came to us.”

Put your money in the sand

There is something else that makes a mockery of our growth-oriented way of life, which ultimately only leads to ever faster decay: the construction costs. To have a bungalow built in Djanan costs 25 000 euros. And

Isra Belalmi (left) presents her thesis on the architectural concept of Djanan. On her right her mother, Prof. Fatima Belalmi, on the far right her aunt Dr. Maya Abdellaziz, the wife of Madjid Abdellaziz.

Isra Belalmi is looking forward to her work as an architect for the Djanan project.

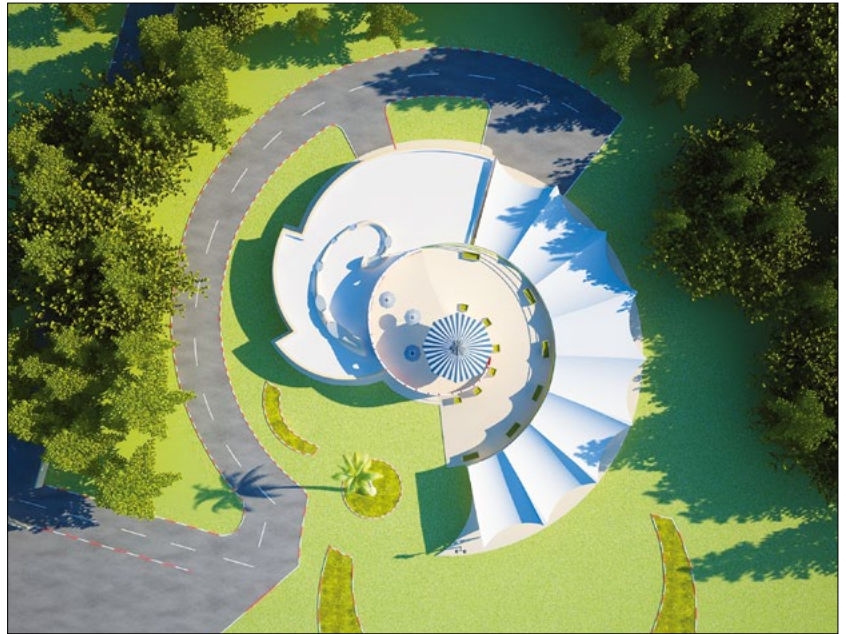

that's only because some quality of life has to be imported. The shell itself consists of a roll of nylon bags, a roll of barbed wire, earth and a shovel load of clay and sand for the plaster. Earth-Bag-Building is the name of the construction method developed by Kaki Hunter and Donald Kiffmeyer.

These buildings are designed for a life span of 400 years and are earthquake-proof due to the dome construction method. The construction technique, says the American Kaki Hunter in the book “Earth-Bag Building”, in which the entire know-how with detailed instructions is published, was developed on the

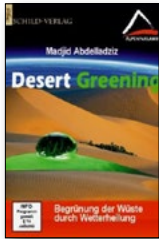

Models of the administration building (above) and a bungalow (below) in Djanan. The predominant form is the fractal spiral, which according to the ancient teachings of the Indian Vastu serves to attract and concentrate life energy.

DVD hint

The organic forms of Djanan's architecture are to be created predominantly in earth bag construction. Nylon bags are suspended in a frame at 20 cm intervals, filled with clay from above and then pressed tight. Clay as well as raffia or wire mesh are also used for the upper plaster – all of them inexpensive materials. © all pictures by Kautz-Vella

Madjid Abdellaziz: „Desert Greening; Begrünung der Wüste durch Wetterheilung“, Alpenparlament. tv, 2009, 9,99 €, Without restraint of age, 58 min.

Book hint

Bernd Senf: „Die Wiederentdeckung des Lebendigen: Erforschung der Lebensenergie durch Reich, Schaubeger, Lakhovsky u.a.“, Omega-Verlag, 2003, 18,90 €, ISBN: 978-3930243280

premise that building should be fast and above all fun. The thickness of the walls ensures a pleasantly cool indoor climate, which in the desert buffers the strong temperature differences between day and night, while the clay content of the walls pleasantly humidifies the air. The architecture thus created appears to be a perfect synthesis of Arabic, cubist-like elements and the round, African huts that are particularly familiar from West Africa. *“Put your money in the sand”*, says Madjid Abdellaziz, *“then you can't lose it.”* This offer is similarly unconventional as the entire construction project. After all, buying a bungalow, as currently offered by Desert Greening, does not make anyone the owner of the same. A lifelong right of residence is granted and a possibility to lock away private property for periods of absence. Otherwise, the ensemble is to be used collectively, so that the buildings can be used in the meantime to house volunteers and students of the planned Desert Greening School.

The green wave

Up to now there is only a small farm for a family, a big barn for tools and some rooms for guests. Plans for the school, an administration building as well as yards for a few more families, who are to manage the steady

ly growing plantations, have been drawn up and are waiting to be realised with the help of donations. But the vision behind Djanan is much bigger. Madjid Abdellaziz, who sees himself personally responsible for the weather work, plans to draw a green belt across North Africa. Initially through a chain of enclaves, which later, similar to Djanan, will merge into a Green Wave according to their natural growth from Morocco to the Arabian Peninsula. Migrant workers in the Maghreb countries or inhabitants of large cities like Cairo are to be attracted, for example. But also, refugees from Central Africa, people who are currently being interned in camps near the coast or who risk their lives in fishing boats on their way across the Mediterranean Sea, could be attracted to a new home. *“If you want to create something big”*, says Madjid Abdellaziz, *“you have to bring something small into the world, but one that is capable of growing out of itself.”* And it seems that the governments of the affected countries are also slowly opening up to the possibilities of natural desert greening. Negotiations are currently underway with the United Arab Emirates. A first cloudbuster ensemble was built in Abudabi in June against payment of the costs by Madjid Abdellaziz, in order to *“see how strong*

the weather blockade over the Arabian Peninsula is.” After two weeks, a dense field of clouds moved over the peninsula from the Indian Ocean, bringing at least some drizzle during the night – impressive enough for the season as a whole to persuade Abdul Jalil, the head of the state forestry office “Barari”, to continue negotiations. And there, in the rich oil countries, there is no spillage: Abdul Jalil hopes for a comprehensive reforestation of the emirate. *“With Abudabi, the other end of the Green Wave would be marked”*, says Madjid Abdellaziz happily. But there is still a lot of work in between. ■

NEW

SPHERICAL HARMONY

for the sky, the earth and humanity

Nature and living beings in harmony

by Madjid Abdellaziz und Peter Kuczera

STAY AWAKE,
HEALTHY AND
CONSCIOUS

This is how the spherical harmony improves the world:

Harmonisation of the atmosphere

Harmonisation of air, soil, water and organic matter. The frequency becomes more natural, similar to the 60s. Old blockages in humans can thus be dissolved. Plant growth is encouraged.

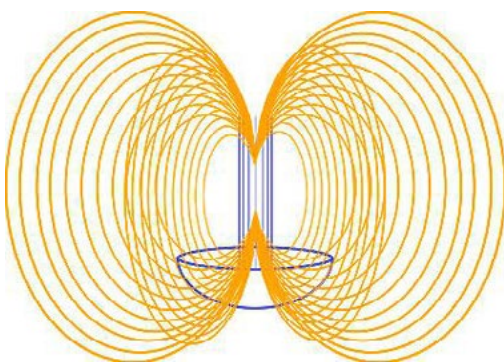

Healthy Air - Dissolving Chemtrails

The spherical harmony can cleanse the sky of the dangerous chemicals and purify the air. This creates fresh, clear air which is healthy to breathe.

Self-determination - inactivating HAARP

Natural frequencies and calming effect. HAARP can't influence us anymore through ELF. .

„It's a good year“ said Galsan Tschinag, writer, tribal shaman and chief of the Tuva tribe in Mongolia. Since there was late but good rain last year and the food supply for the cattle of the Tuvan nomads was therefore sufficient, a large part of the herd will probably survive. This is now the exception, as the figures of recent years make clear. Up to 80 percent of the livestock did not survive the grimly cold Mongolian winters with temperatures as low as -40°C . Thanks to the efforts of the Galsan Tschinag Foundation¹ and Swiss aid funds, the livestock has been replenished through purchases, enabling the Tuvan people to preserve their traditional grazing grounds.

One million trees

The Galsan Tschinag Foundation, on whose behalf Madjid Abdellaziz and I travelled and performed the celestial acupuncture, is fed by the proceeds of the book sales of the writer Galsan Tschinag, his reading and healing

journeys, donations from the German and Swiss Friends of the Foundation and, more recently, by grants from aid organizations that co-finance the Foundation's large tree project.

The foundation wants to plant one million trees. One million life-producing heavenly giants that fill the air with moisture. Because there is a lack of that too. In the last 20 years there has been a radical clear-cutting of the forests without regard for the ecological consequences and without foresight into the social problems that arise from it.

The climate change can be felt everywhere in Mongolia, in the mountains, the desert, the steppe and even on every corner of the fence of Ulan Bator (the capital of Mongolia). The clear cutting of Mongolia's forests was also used to erect two-meter high picket fences. The once proud nomadic people now live in hundreds of thousands behind wooden shacks in dust, alcohol and misery. The people in the countryside and the nomads

who stayed there still live in the family, in the clan. They enjoy the community and rejoice in life. Nomads are happy people and they are peaceful, not quarrelsome. In the big city, however, they have to fight for their daily survival.

The country needs water

About 1.1 million people live in Ulan Bator. That is 40 percent of the total population of 2.7 million people, which is growing by about 60,000 inhabitants annually. The country is four and a half times the size of Germany. Most of these people were not born in the big city, but belong to the Mongolian or Tuvan nomads. Many nomads have moved to the city because they have lost their herd, their livelihood.

The rain, which 20 years ago from the west or north-west reached the country already in April and May and saturated the soil, gradually stopped and now falls mainly in July and August on dry soil. Thus, the

acupuncture in Mongolia

raum&zeit readers have long known that celestial acupuncture with cloudbuster devices according to the method of Wilhelm Reich is not only theoretically feasible. Now a new desert greening project has been started in Mongolia, supported and initiated by the Mongolian author Galsan Tschinag. Paul Jakubczyk, who was part of the team, reports on the successful project.

By Paul Jakubczyk, Weimar

steppe grass does not receive water for growth until very late in the year and develops correspondingly meagerly. The yak breeding (Mongolian cattle) gives way more and more to sheep and goat breeding. While 20 years ago the nomadic herd consisted mainly of yaks, sheep and a maximum of 10 percent goats, today the figure is 30-40 percent. Goats are root-eaters and thus destroy the grazing grounds in the long run. Furthermore, sheep need good summer and autumn fodder in order to eat an appropriate fat supply. If this is not possible, they usually do not survive the winter.

But what exactly is the reason for this problem? In the times of the USSR, between 1949 and 1989(!) in today's Kazakhstan, on a test site near Semipalatinsk, 496 atomic bomb tests were officially carried out, 383 underground and 113 above ground. This corresponds approximately to the explosive force of 2500 Hiroshima bombs. These tests destroyed large parts of the animate atmosphere and created extensive DOR (Deadly Orgon) blockades (Fig. 2). They extend far into the Al-

tai Mountains and into Mongolia. Uranium mines are also operated, for example on the Chinese side in the western province of Xinjiang and on the Mongolian side in the eastern region of Mardai-Dornod. These deposits also release a high dose of radiation and affect the atmosphere. Galsan Tschinag describes the situation as a three-headed dragon (deforestation, nuclear tests, uranium mining), which holds the country firmly in its grip. In 2008, the idea was born to confront this dragon. Through Prof. Bernd Senf I had learned about a desert greening project in Algeria², in the Sahara. So, in 2009 I arranged a meeting with Bernd Senf and Madjid Abdellaziz in Weimar during a reading tour of Galsan Tschinag and with that the project of celestial acupuncture in Mongolia was born. In the years up to 2011 the concept was created and material and the financing of the celestial acupuncture was secured.

Fig. 3: Morning Agnihotra fire ceremony with Madjid Abdellaziz (left), Galsan Tschinag (3rd from left) and the author (2nd from right).

Since we could only use a very narrow time window from April to mid-May for the actual operation, the start of the work was set for April 1, 2012.

Shamanic rituals, cloudbustering and good thoughts

As a starting point, we found an extremely strong DOR load on site, which manifested itself in a large smog over Ulan Bator and in DOR streaks in the sky (Fig. 2). On satellite images we were able to observe how powerful cloud flows were deflected by the large-scale blockades and thus prevented from passing through the Mongolian territory.

Fig. 2: Smog and DOR bell of Ulan Bator before the beginning of sky acupuncture.

Orgone and DOR

The Austrian psychiatrist and life researcher Wilhelm Reich (1897 - 1957) called orgone the cosmic life energy discovered and proven by him, which is found not only in living organisms but also in the atmosphere. It is probably identical with the Asian concepts of Indian prana and Chinese chi. Unfavorable environmental conditions, caused for example by uranium mining or nuclear tests, transform the orgone to deadly orgone, abbreviated DOR. This is hostile to life, leads to a standstill of the energetic exchange between sky and earth and thus to degenerative climatic conditions like desertification. Reich and his successors developed a technology with which DOR can be sucked out and converted back into orgone in the earth. An example of this is the "celestial acupuncture" set here.

From the first day on, we began to cleanse the atmosphere. Every morning at sunrise an Agnihotra fire ceremony was held on the provided area, as well as a shamanic sun salutation by Galsan Tschinag (Fig. 3). If time allowed, we repeated the procedure at sunset. Agnihotra is a process of "disinfection" from the science of bioenergy given by the Vedas. If done regularly, Agnihotra gives great healing powers to the atmosphere and to the person performing it. The shamanic sun salutation complements this fire in an ideal way. According to Tuvan tradition, the spirits are called to assist in the reunion of Mother Earth with Father Sky.

Parallel to this we set up a modified Wimshurst Influence Generator (see glossary) with north-south orientation to increase the potential differences in the sky. After a while cloud formations could be seen, indicating a clear atmospheric transformation. During the cleaning process the clouds began to pulsate. Grey DOR streaks disappeared and white clouds appeared. Within a short time, this picture turned around again and the clouds were "eaten up" by the grey DOR streaks again. This pulsation could be observed all day long. But this is not unusual: *"The key to the structure of*

Fig. 4: Cloud compression caused by the cloudbuster. The higher potential of the cloud absorbs the lower potential of the surrounding area and cloud fields are created which combine to form a cloud cover.

the entire spiritual and physical universe is the rhythmically balanced exchange between all opposites" (Walter and Lao Russell).

The started process was not yet sufficiently stable without Cloudbuster. However, it turned out that the influence generator already transformed the earth-typical decaying oscillations (DOR). The cloudbuster was invented by Wilhelm Reich. On the outside it resembles a cannon. However, its task is not to bombard, but to direct orgone flows (potentials) to build up rain clouds. At the same time the Cloudbuster diverts DOR currents and transforms them in a water basin. Read more about it in the next issue.

Observer influence

If a scalar field (see glossary) is created when the longitudinal waves are coupled between the cloudbuster and the cloud, "time reversed replica waves" are generated. These amplify the scalar potential at the cloudbuster more and more. The same happens at the observer. This principle of resonance (see glossary) is based on the fact that an event probability arises when the intention as a supply wave meets the echo wave coming from the future. If these two then run into phase, they reinforce each other and lead to the collapse of the state vector when the transaction is complete.

This collapse is neither limited to a space nor to a time. Experiences and changed states of consciousness create such supply waves and find correspondingly optimal echo waves. Beside the technique also the trained observer, with his aligned consciousness, is an essential influencing factor.⁴

Celestial acupuncture

After completion of the Cloudbuster and the water basin, the first sky acupuncture was performed on the 8th of april 2012. First, cloud formations appeared as if from nowhere, showing the flow of potential fields in the sky. Very clearly, textbook-like, a vortex movement in the sky appeared as a self-supporting energy movement. From the compression of the energy towards the center of the vortex, matter⁵ is created (Fig. 1). We started the operation with a working angle of 20 percent in western direction (270°), in order to also bring about a smog reduction in Ulan Bator. The sky cleared up quickly and the blue (orgone) became stronger. The second operation was then carried out with 30 percent in north-western direction (315°). The first cloud compression occurred, beside which we then aligned the cloudbuster to increase the potential difference between the cloud and its surroundings. The cloud remained stationary and then sucked in more and more potential, so that it grew steadily (Fig. 4) and further densification occurred. Since a scalar field exists between the cloudbuster including the water basin and the cloud, information from the basin water is also available for cloud formation. The pool water is continuously fed with water structure information via bioenergetic devices. The ionized water molecules H₂O⁺ in the air are virtually reminded of their molecular and structural shape. In the presence of gamma radiation (biologically effective hard rays, such as X-rays) in the atmosphere, according to investigations by a German research group, so-called Coulomb decay occurs. In this process,

water dimers (two adjacent H₂O molecules) and also higher cluster structures are ionized, and low-energy electrons are created through the process of autoionisation. The resulting H₂O⁺ ions repel each other electrostatically and fly apart explosively in opposite directions. These ions and electrons can in turn occupy the aerosols of the air and thus prevent condensation. If we add the ether theory, we can say: Clouds (matter) are created out of the ether (consciousness) by swirling life energy (orgone) and light. According to Burkhard Heim, the information condenses in the structural space S2 (torus) and then gives birth as matter into the four-dimensional world of our everyday reality. In all the following operations, sudden drops in temperature and the formation of tornadoes occurred again and again as a side effect. By changing the angle of attack, the operating range was readjusted.

Measurable and noticeable effects

On the 9th of april 2012 the weather forecast had to be rewritten, which had previously predicted light cloud cover for Ulan Bator and temperatures of 7 to 8 °C. On this day the sky was then completely cloudy and temperatures of -5° C. During the next days there were light rains and the air cleared up considerably. Galsan described the blue sky, as in his novel of the same name, as the sky of his childhood, which he had never seen before. The installation of a primary and secondary coil according to Tesla in the water basin stabilized the weather events. This effect was enhanced by the erection of a precisely aligned pyramid structure above the basin. On the last day of our work, 14th of april 2012, we changed the angle of attack once again to 45 percent. It took only seconds and the sky cleared up once again in a way we had never experienced before. On 18th of april 2012, three days after our return, it snowed the whole day, since 21th of april 2012 there was snowfall and rain again and again. The cloud fields are flowing through the area of Mongolia

again. April 2012 had no precipitation in Mongolia before the celestial acupuncture. Now there is precipitation again, which also continued in May. And the rain/snow also reached the nomadic areas and not only the capital. Even on dry days the humidity is now up to 40 percent. A beginning has been made, a beginning that is promising. But we know from experience that it could only be a first step. A first step on a long road to healing the atmosphere that has been damaged for decades. Just as everything in nature vibrates, everything has its own frequency, so too will the work have its own vibration. After times of impulses there will be times of stagnation again. Patience, care and humility are needed. And we must stop evaluating Mongolia for its mineral resources and should start to repair the damage we have done to nature and mankind. Even with means that are not always understood and accepted by mainstream science.

The winds and clouds are the spirits of the steppe. For the nomads and the nature of Mongolia, it is good spirits who do their work there. In gratitude and humility 2012 and the following years will hopefully be good years again. ■

Glossary

Scalar waves are directional waves that propagate in the direction of a field pointer (longitudinal waves). Although they also occur as gravitational waves or as sound waves, they are of paramount importance especially as electric and magnetic field phenomena. They interact with each other by going into resonance.

Resonance: This is a synchronization of two sources oscillating at the same frequency but with opposite polarity, which requires interdependent influence. In the case of resonance, information is exchanged, and energy is transferred until a balance is established between the sources for both components.

Wimshurst machine: It is an influencing machine which diverts and stores electrical charges from the air. It requires a mechanical rotary movement. High voltages of up to 100,000 volts can be generated. It is named after the British James Wimshurst (1832 - 1903), who developed it in 1878.

The author

Paul Jakubczyk

born 1962, studied geology/hydrology at the Free University of Berlin. For 20 years he worked for industry, state and federal ministries as well as the UN. For many years, the focus of his work has been on combining scientific research with spiritual philosophies and teachings. His broad scientific education in the earth sciences is combined with psychology, linguistics, quantum medicine and shamanic healing. He received his initiation as a healer in Mongolia and in Germany. He works worldwide on the healing of people and places.

Reich-Speak for

Attempt of an approximation to the weather work according to Wilhelm Reich

Fig. 1) Vibrations that run around the earth are stable if they connect harmoniously to themselves again after one revolution. On a spherical surface there are a limited number of mathematical solutions to this problem, which can be represented by the Platonic solids. On the edges of the Platonic solids are the nodes of the oscillation, on the surfaces the antinodes. All five Platonic solids are manifested in this form in the oscillation field of the earth.

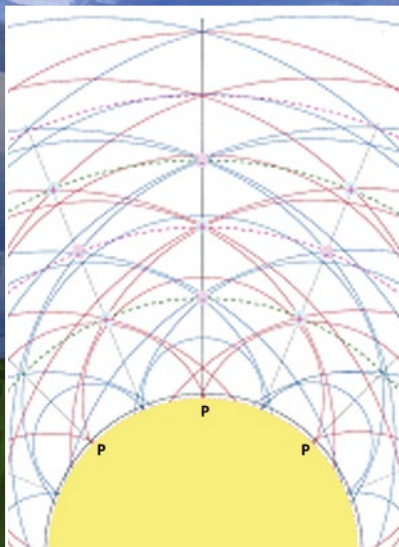

Fig. 2) Towards the top a complex pattern emerges: Along the dotted line, the Platonic solids are constantly being reproduced at different heights.

Research into the energy of life has always been the domain of private researchers, outsiders who often came up with innovative technologies, but who generally found it difficult to keep up with established physics and its nomenclature. So the answers to the question, what is actually orgone and DOR (deadly orgone, harmful orgone), these forms of the building and dismantling forces of nature, described by Wilhelm Reich, have always turned out rather unsatisfactory so far. The esoterics nod and say that this is the same as Prana, Chi or Vril, which leaves the physically trained mind no less perplexed. Yet it is not at all difficult to place Reich at the feet of established field physics, even if one has to fall back on exotics such as longitudinal, scalar and torsion fields.

But let us start with the simple things: The Earth is bombarded from space with ionizing radiation. When the particles penetrate the upper layers of the atmosphere, ozone (tri-oxygen O₃) is created, while other parts of the radiation only deve-

lop their ionizing effect when they hit the Earth's surface. The result is electrostatic charging: In good weather, the ground receives an excess of electrons and is negatively charged, while the atmosphere is positively charged. This is called the earth's electrostatic field. But on closer inspection it is not so static. Because in this field different earth-spanning wave patterns are formed. The intersections of these waves form grid lines that envelop the earth with all five Platonic solids (Figs. 1 and 2).

Altogether, this part of electromagnetism, in addition to the normal dipole field, is responsible for 14 to 16 percent of the measurable Earth's

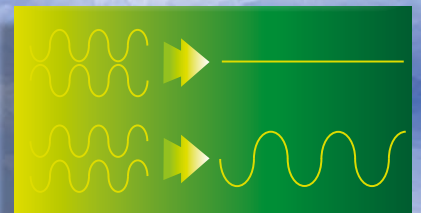

Fig. 3) In-phase waves reinforce each other, opposite-phase waves cancel each other out.

Cloudy

It can't rain from a blue sky; it needs a cloud. This cloud consists of fine water droplets or tiny ice crystals. For a cloud to form, the humidity must be just over 100 percent and at the same time electrically charged condensation nuclei such as dust particles, aerosols or even

physicists

In two previous articles Harald Kautz-Vella has explained how radioactivity blocks the life energy – the Reich’s “orgone” – and leads to desertification. He also showed, based on the work of the Algerian Madjid Abdellaziz, how this blockade can be dissolved with near-natural orgone technology. What seems to be “magic” can be explained with the latest scientific findings – Reich-Speak for physicists.

By Harald Kautz-Vella, Görike

magnetic field, with the oscillations running in the north/south direction being responsible here, whereas the equatorial ones are usually extinguished as standing waves. Extinction is obtained when a clockwise and an anti-clockwise wave are exactly in antiphase (Fig. 3).¹ Nevertheless, these waves continue to exist in the form of a longitudinal wave that cannot be measured conventionally.

Complex frequency mix

The Platonic solids create a complex, inherently harmonious mix of frequencies, the best-known representative being the Schumann frequency. The fundamental equatorial frequency (11.75 Hz) times 2/3 gives the Schumann frequency. This means that the equatorial and Schu-

man frequency are in the ratio of a fifth to each other. Figuratively speaking, one could say: the atmosphere is a spherical loudspeaker and hums at all possible natural frequencies. Quite melodic.

Back to the image of the static electric field: heaven and earth together form a spherical capacitor. The sky, the upper “plate”, vibrates and sends electromagnetic signals, which, due to the large wavelengths or surfaces of the Platonic solids, hit the earth as a shock wave, i.e. as a longitudinal field. The earth’s surface is the other, opposite “plate”. And it also oscillates. If you stick two iron rods into the earth at a distance of two metres, you can measure these oscillations as an electrical signal with the aid of a measuring device. This

signal is also multi-frequency. Here, too, the vibrations go around the earth, so undisturbed that it is no problem to read out the 60 Hertz of the American power supply network in Germany at the same strength as the European 50 Hz.

When does harmony prevail?

At the latest here, at the technical frequencies, one can see that the oscillation patterns of the sky and those of the earth are not necessarily identical. It makes sense – based on established natural science – to ask whether sky and earth are in harmony with each other. If they are, if they have the same frequencies in their oscillation patterns, then according to the findings of non-linear optics (Figs. 4 and 5) these fields can be superimposed and coupled. Two longitudinal waves of identical frequency in opposite directions (phase shift of 180°) form a scalar wave, the energy content of both fields cancel each other out, i.e. the energy is pressed into the quantum vacuum. The weaker of the two waves becomes the so-called phase conjugate replica wave, i.e. it behaves like a normal wave running backwards in time², and thus creates the possibility of spontaneously concentrating electromagnetic potential – from the weaker to the stronger potential (Figs. 6 and 7).

cosmic radiation must be present in sufficient density. If heated air rises, it cools down and the air humidity can rise to over 100 percent. If water vapour condenses, heat is released and the air can rise even further. This means that clouds can form even at a height of 13 kilometers. Each type of cloud – the international cloud atlas lists ten types such as Cirrus, Stratus or Cumulus – has its own formation conditions, which are not yet fully understood.

(Quelle: <http://nlomeeting.blogspot.com/2011/06/celebrating-50th-anniversary-of.html>)

Here something happens that is visible in cloud formation every day, but which cannot be understood by simple physics. A place of high potential combines with a place of low po-

the quantitative change in the scalar field can be measured by changing the capacitance of a quartz capacitor. And sometimes these scalar fields can be seen with the naked eye. In

the cloud, increase the potential difference between the cloud and its periphery, with the result that the cloud can suck in even more potential due to the steeper gradient to its surroundings and grows. This is how Reich made rain.³ Every increase in the potential difference in the sky leads to a livelier weather event and usually to rain.

Every increase in potential differences in the sky leads to a livelier weather pattern and usually to rain.

Wilhelm Reich (1897-1957)
Discoverer of the „orgone“.

tential and "sucks" its further empty, thereby gaining strength, and "sucks" it even more strongly. Just like a passive Helmholtz resonator, the sound absorber box picks up the annoying natural frequency of the sound studio from the room by coupling the wave packets and then "sucks" it away until it runs out. Basically, simple acoustics, fully understood and applied in the field of sound - another longitudinal wave - but hardly understood in the field of the electromagnetic fields of the sky.

Scalar fields are measurable

For a long time, the scalar fields thus created were considered to be unmeasurable. But in fact, they are. Although they do not produce electromagnetic induction, they do change the dielectric constant of certain materials such as quartz, so that

weather work, when a flow between two potentials suddenly draws a spiral cloud to the sky (Fig. 8), or in a twisted tree trunk that is nothing more than the material expression of a fixed torsional field through which the energetic exchange between sky and earth takes place.

With this background it is relatively easy to understand the weather work with the so-called cloudbuster according to Reich. The cloudbuster is like an absorber box directed towards the sky, which is grounded on the other side by contact with the ground water. If I point it at a cloud, i.e. a place of high field density, the fields from the earth, which vibrates strongly with its surplus of electrons, and the cloud couple and I suck potential from the sky. The cloud loses its potential towards its periphery and dissolves. If I aim close to the cloud, I reduce the potential next to

Harmful vibration patterns

A DOR atmosphere is created when sky and earth are in dissonance, when, as a consequence, the coupling of the fields becomes impossible, when the exchange between heaven and earth ceases. An example is desertification, when vegetation disappears and can no longer perform its important mediating function. Then the oscillation patterns typical of the Earth spread in the atmosphere, disrupt the harmony of the oscillation patterns of the sky, prevent fluctuations and potential build-up. This can be caused, as already mentioned, by a destruction of the plant cover, by direct influence of electro smog or by the above-ground release of radioactivity - of substances that belong in nature's blueprint underground, where their decomposing forces, as Walter Russel (see article: "How radioactivity destroys life", in this issue) described it, are in the right place and fuel the formation of humus, but not into the atmosphere. To heal such a solidified atmosphere, the DOR - i.e. the earth-typical, decomposing vibrations - must first be

Phase conjugated wave pairs generate new waveforms

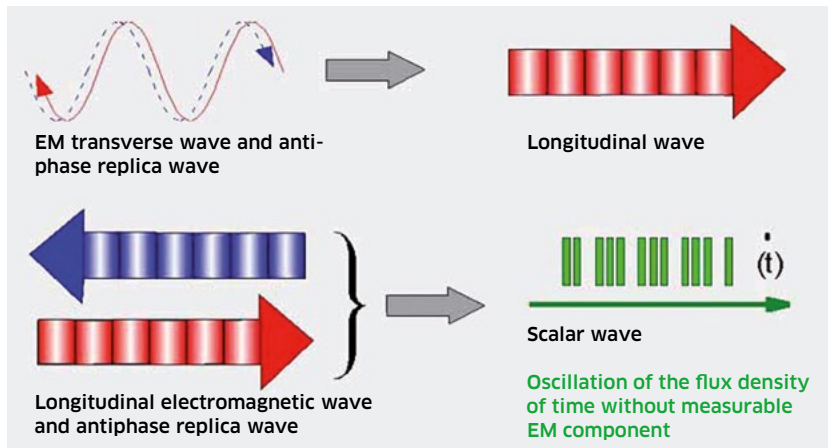

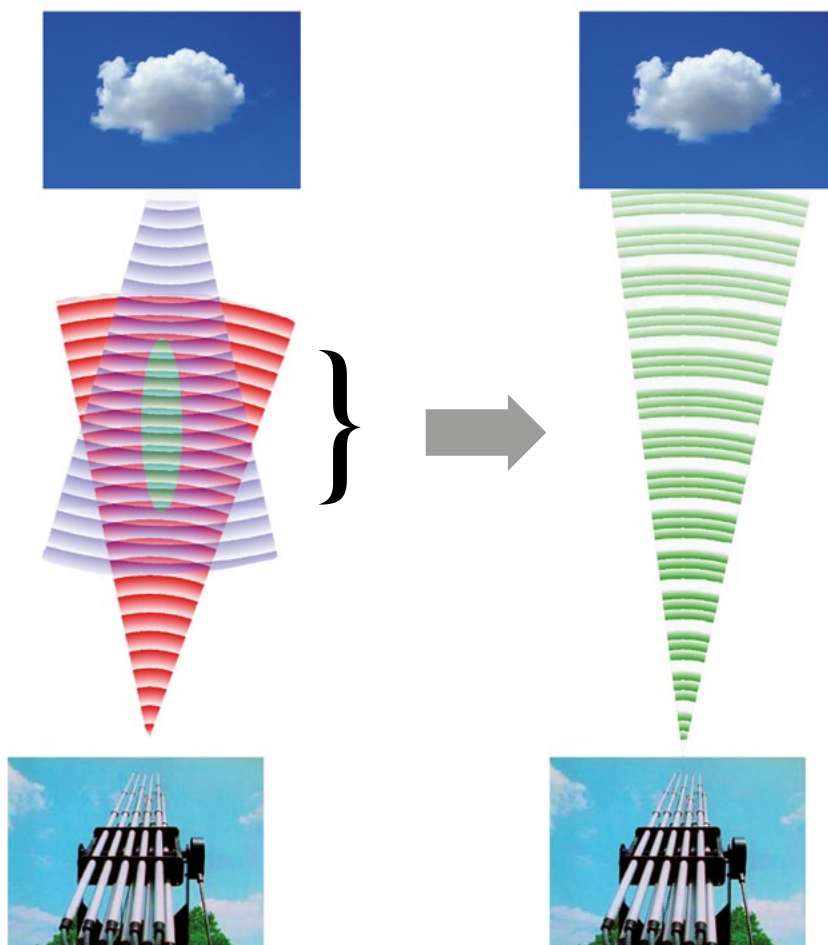

Figure 6) Generation of the scalar wave according to Tom Bearden in two steps. First, two counter-rotating transverse waves superimpose to form a longitudinal wave - e.g. when two electromagnetic oscillations orbit the earth in opposite phase and cancel each other out. Two of these longitudinal waves can form a scalar wave under certain angles, e.g. 180°, a fluctuation of space-time itself - as it happens with the fields between sky and earth.

Coupling of the longitudinal waves between cloudbuster and cloud to a common scalar field

The two longitudinal waves from cloud and cloudbuster begin to couple when the frequency is identical (left). The strong source from the cloudbuster's tubes dominates the wave from the cloud and transforms it into a "time reversed replica-wave", a wave that behaves as if it were travelling backwards in time, thus increasingly amplifying the scalar potential at the cloudbuster (right).

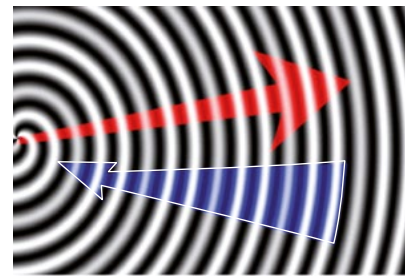

Figure 7) wave and time reversed replica wave (for example: time-reversed response wave). This possibility becomes interesting if a spatially small, strong vibration source is opposed to a spatially large, weaker vibration source. Then the oscillation of the large, weak source becomes the *time reversed replica wave* of the small, strong source, which can accumulate more and more potential.

extracted. Only then does it make sense to increase the potential differences in the sky and to revive the weather.

So basically, only one, decisive question remains open: Where does the water for the rain come from?

Let us first look at a natural pattern of origin of a heavy or thunderstorm rain: The prerequisite is warm, humid air near the ground, with a

For a long time, scalar fields were not considered measurable. But in fact, they are.

relative humidity of over 60 percent, and a temperature gradient of more than 0.65°C per 100 meters of altitude. Under these conditions, the air stratification becomes unstable and the warm, moist air masses rise. In the process, they expand and thus cool down until condensation occurs - provided that there are sufficient aerosols as condensation nuclei. If this is not the case, the air can become up to 800 percent supersa-

turated with water vapour before it rains.

How rain occurs

The height at which the dew point is reached defines the lower edge of a cloud. As droplets begin to form, the air is additionally heated by the re-

leased heat of condensation, thereby expanding even more compared to its surroundings, rising even faster and forming the rain-bringing tower or cumulonimbus clouds with their strong internal updrafts. The clouds grow by sucking in more and more humid air from below. It rains when

the water droplets have become so heavy that they fall faster than the updrafts carry them up. The height of rain cloud formation is between eight and twelve kilometers.

The observations made when making rain with cloud patterns follow a completely different pattern, however. The formation of rain clouds starts spontaneously here, sometimes already at an altitude of 800 to 2,000 meters. This is accompanied by a drop in temperature, sometimes with down winds that can form tornadoes. The difference in weather patterns is clear and raises two questions: How does weather work lead to these drops in temperature, which are clearly not caused by adiabatic expansion? And/or: Why is there suddenly enough water - without the need for expansion by rising to a height of 10,000 meters, which cools the air masses and brings

The drought in the Sahel is a consequence of nuclear explosions and uranium mining.

them to the dew point? These questions cannot (yet) be answered conclusively, but there are promising approaches. Wilhelm Reich himself stressed the role of ozone. He noted that the ozone content in DOR-laden atmospheres was high, an observation that was confirmed decades later by measurements in smog. Reich himself assumed that by changing the electrophysical quality of the atmosphere, the ozone dissociates, and the monoatomic oxygen released forms additional water.

Blocked aerosols

Anyone who knows the ozone concentrations measured today is likely to smile at this idea, as we are talking about a maximum of 0.3 mg per cubic meter. Even if the ozone were to find free hydrogen, the amount of water formed would be negligible. But today we know a different relationship between ozone and rain formation. Ozone causes the hydroxyl radical (OH-) to form, and this blocks the aerosols that form the condensation nuclei for rain. This opens the way to a supersaturation of the atmosphere with water vapor – as already mentioned, up to 800 percent above the dew point. If the ozone formation is successfully inhibited, the aerosols remain active and rain can form again in a saturated atmosphere. How the cloudbuster causes the ozone to transform back into normal oxygen remains to be seen.

But this is where the topic of radioactivity comes in. This is because released radionuclides also produce ozone in the lower layers of air with their ionizing radiation, thus inhibiting rain formation by blocking the aerosols. Whether this is the nuclear effect or merely a side effect of the effect at field level is left unanswered here. After all, it is a solid model for explaining the drought in the Sahel zone, which has spread over Africa since the French nuclear tests and especially since the uranium mines in Niger were commissioned in the 1970s.

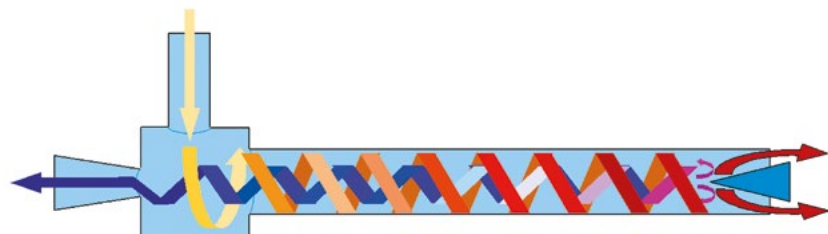

Fig. 9) The Ranque-Hilsch vortex tube is a device without moving parts, with which gas can be divided into a hot and a cold flow. Pressurized gas is injected tangentially into a vortex chamber and is set into a fast rotation (over 1 000 000/min). Due to the high centrifugal forces and other processes that are not yet fully understood, the gas stream is divided into an outer hot and an inner cold stream. The vortex tube was invented in 1933 by the French physicist Georges J. Ranque. The German physicist Rudolf Hilsch improved the design.

The thermals of the vortices

However, this approach does not explain by far why spontaneous drops in temperature occur in connection with weather work. The phenomenon that temperatures change without any visible energy input or output is always associated with vortex formation in nature. Water vortices cool down spontaneously to 4 °C in the core, collapsing cavitation bubbles filled with water vapor heat up to 40 000 °C in the vortex core, and in the Ranque-Hilsch tube (Fig. 9), an air vortex standing in a cylinder, there is a temperature separation between core and periphery with temperature differences of up to 120 °C. Viktor Schaubergers "Klimator" used a corrugated, gold-plated copper disc to generate an air vortex that influenced the water molecules in such a way that they absorbed or emitted infrared radiation depending on the rotational frequency – and so he was able to cool or heat entire rooms without having to expend energy for this – except, of course, for the constant 200 watts that the electric motor needed to keep the disc rotating. And if one is open for it: also, the encounter with disembodied life-energy-vortex-fields (vulgo ghosts), according to statements of affected persons is always accompanied by a cold breeze of air.

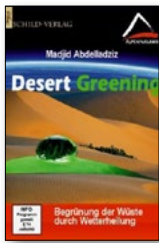

This would be an explanatory model: thanks to their vortex characteristics, the resulting scalar fields spontaneously cool the air, which locally leads to drops in temperature, cold downwinds, condensation of water vapor, cloud formation and rain from low altitudes. The fine, fractal drawings, which show the clouds created by weather work in their formation phase to the sky would speak for this.

Biefeld-Brown-Effect

There are, however, three further mechanisms which are controversial from an academic point of view, but which could be considered as mechanisms of action in their manifestation. The first is the so-called Biefeld-Brown-Effect. Asymmetrically shaped, electrically charged capacitors experience recoilless acceleration in the di-

Strangely enough, during cloudbuster operations, rain does not show any of the typical degeneration phenomena that all water on earth has now suffered through our civilization.

rection of the smaller plate thanks to their highly inhomogeneous electric field. The effect is interesting because it challenges two main theorems: the law of conservation of energy and the law of conservation of momentum. Nevertheless, Brown says that he was able to prove the effect in the laboratory, and a whole generation of tinkers use this effect to fly. Water molecules and hydroxyl ions also form a dipole (capacitor) with one large (O) and one or two small (H) “plates” and a correspondingly inhomogeneous field between them. If these molecules succeed in aligning themselves in space, they accelerate in the direction of the H or both H atoms according to the Biefeld-Brown-Effect.

The alignment itself does not require any extra energy, i.e. it is only a question of the self-organization of the water vapour or the hydroxyl ions in the atmosphere, which decides whether the vapor moves in a specific direction and is thus able to concentrate spontaneously locally. This would be a mech-

anism that could play a role in cloud formation.

The second effect that might be of interest first came to my attention when I accepted the challenge for the company Cobra (masonry drying) to prove the functionality of the devices in the laboratory as an expert witness in a court case against the company. The device called “Cobra” consists essentially of two copper spirals and is supposed to work on a similar physical level as the Cloudbuster. At that time, I recommended a setup to the company that would make the migration of water under the device visible. Hundreds of pipettes were used, which sprinkled a foam bed.

Wonderful water loss

The experiment itself was rather unsatisfactory, but two other effects occurred which caused surprise: The physical quality of the water in the collecting basin changed under the Cobra with the phases of the moon, and on selected days the water developed such strong cohesive forces that it looked as if it had gelled – a

five millimeter deep notch formed at the edge of the vessel. A strengthening of the cohesion forces, the cohesion of the water molecules among themselves, could also play a role in the formation of rain. And water disappeared from some of the sealed pipettes that had been laid out ready. It simply disappeared – from closed vessels. I myself fell away from belief at that time, because I had firmly reckoned with an influence of the Cobra on the migration behavior with increased and/or directed adhesion. But sometimes, for example when it rains again over the Australian continent⁴ I think of the first chapter of Genesis: “*and the Spirit of God hovered over the waters*”, and the Flood in its early descriptions, where “*the waters of heaven and earth united*”, I think of Matti Pitkanen’s Multidimensional Universe⁵ and wonder if there isn’t a space-time foil in the immediate vicinity, there is a dimensional plane which is completely filled with water, in which the “Spirit of God” dwells and from which our reality was once formed – from which, in certain field constellations, the water comes over to us through small or large wormholes: Over Australia, including fish, in the last and perhaps coming Flood, and also in cloudbuster operations, after which the rain strangely enough does not show any of the typical degeneration phenomena that all water on earth has meanwhile suffered through our civilization, but rather produces very pure, virgin water, as we would expect from a fountain of youth. ■

CELESTIAL ACUPUNCTURE

Integral environmental healing thanks to spherical harmonisation

Interview by Corinne Gut Klucker

CAN YOU EXPLAIN WHAT YOU MEAN BY CELESTIAL ACUPUNCTURE AND SPHERICAL HARMONIZATION?

Madjid Abdellaziz: The method I call celestial acupuncture is based on the work of Wilhelm Reich. Reich had discovered in 1954 how to produce rain and tested this in the desert of Arizona.

Madjid Abdellaziz is an engineer and scientist, Rainmaker and greener of the desert. Chairman of the association «Desert Greening» - Integral environmental healing.

He called his invention "Cloud Buster", which means cloud destroyer, because it could also make clouds smaller or even disappear. The real reason why there is no rain is because of energetic blockages in the atmosphere. Radioactivity plays a major role in this, not CO₂. My construct resembles a modern sculpture with needles pointing to the sky. It can harmonize frequencies in the atmosphere. This is what I call celestial acupuncture. It works like Chinese acupuncture, which rebalances the energy flow in the body. To dissipate the energies I need water, like Wilhelm Reich. In order to do this with a small basin, I let the cleansing

SPHERICAL HARMONISATION

whirling technique of Schauberger flow in. Further I integrated considerations from mathematics, science and physics and discovered that more is possible than just absorbing or dissolving energies. I observed that an electromagnetic field is also building up, which is so strong that it can also influence people. This realization inspired me, and I developed my construct further and further, integrated the "Schumann frequency", and finally called it "Spherical harmony", because it harmonizes human beings, animals and the environment. The living beings in the vicinity of a "Spherical harmonizer" feel a pleasant energy, fears disappear, they experience harmony and healing and are one with the universe.

YOU GAINED YOUR KNOWLEDGE THROUGH THE THEORIES OF WILHELM REICH, VIKTOR SCHAUBERGER, NIKOLA TESLA AND OTHERS. WHAT IS THE ESSENCE?

They have all discovered great, earth-shattering things that are more relevant today than ever before. To name just a few: Reich was a doctor and psychiatrist and discovered orgone, primordial cosmically characterized energy. The cosmic energy is comparable to a power outlet to which I can connect various things and use the energy in many ways. Viktor Schauberger discovered the vortex principle of water for power generation and water purification.

Holo-Fractal-Harmonizer

The Holo-Fractal-Harmonizer changes the environment into an alkaline area, where nothing disharmonizing can exist anymore.

Computers, mobile phones, wireless phones, smart meters, electrical wiring, televisions and other devices no longer negatively influence our organic functions.

We can regenerate at home and regain our strength.

Nikola Tesla was a genius. We have to thank him for alternating current, radar and telecommunications technology and the wireless transmission of information. Tesla opened my eyes to see the connections.

WHAT DOES THE INTEGRATED SCHUMANN FREQUENCY IN YOUR CONSTRUCT DO?

The Schumann frequency is the phenomenon that electromagnetic waves of certain frequencies form standing waves along the circumference of the earth. When it was discovered, the frequency oscillated at 7.8 Hertz. By 2019 it has already increased to 13 Hz. This creates a hectic pace, but also makes multitasking possible for children. My generation is still the romantics, Thai Chi, meditation. All the disciplines that we don't feel well today that many don't believe in anymore, are part of that time. Today it has become silent, the heart loses the ability of real experience at such high vibrations / earth resonance frequencies. This is also the reason why so many original mastery disciplines such as yoga, meditation etc. are experiencing a boom nowadays. Man is searching for his lost connection. That is why the original Schumann frequency emanates from my system. It creates a field that our body needs to function properly again and feel at one with nature. The everlasting thinking stops, you no longer constantly circle around your fears, you feel free and light. Animals and plants feel this, too, and it gives the elixir of life, water, a great benefit.

BE GOOD - DO GOOD - BE ONE

WE HAVE BEEN EXPOSED TO RADIATION FOR DECADES. MOST RECENTLY, 5G. HOW DO THESE FREQUENCIES AFFECT OUR THINKING AND ENERGY OF THE BODY AND WHAT IS THE "SPHERIC HARMONIZER" CAPABLE OF?

We understand the world in harmony because the Schumann frequency influences us. When this frequency is manipulated, the way people think changes too. 5G can influence our thoughts and behaviour. 5G frequencies can control and change people. If the pineal gland is reduced by

manipulation, the human being becomes an "animal". It should not be forgotten that 5G was originally created by the military and was and is used for manipulation and surveillance. The spherical harmonizer restores the original order, for the benefit of all living beings, so that we can individually and freely unfold.

IS IT POSSIBLE TO BRING PEACE USING YOUR DEVICE?

Yes, that's actually a side effect I didn't think was possible. However, it turned out that within a radius of several hundred kilometers around my spherical harmonizer in Algeria, a peaceful atmosphere established itself. 35 million people were on the streets demonstrating peacefully. One has never seen anything like it before. The wall of fear had fallen. There was no violence because everyone felt safe and knew that nothing could happen. Everyone felt their strength. Fear is your greatest enemy, it confuses you, makes you lose and take the wrong path. Another example is the installation of two big Spherical Harmonizers: The peace agreement Minsk I and II was signed. The small Spherical Harmonizer harmonizes a radius of about 180 kilometers. In connection with the big Spherical Harmonizer, they create an even stronger field of peace. With my devices I would like to create the breeding ground for world peace.

WILL THE HOTEL HAVE MORE VISITORS AND DO THE GUESTS FEEL MORE BALANCED?

Since I installed a Spherical Harmonizer in a hotel complex in Kaiserslautern, the hotel is always full. Before that, the manager had to struggle with a poor occupancy rate and dissatisfied guests. They even created a park around the installation, where people like to get married. People are more conscious, happier, become free of worries and the general well-being increases. A plus for the inhabitants, the economy and a basis for satisfied guests and successful business.

YOUR MOTTO IS: EVERYTHING HAPPENS FROM THE HEART - BE LIKE SALAD, CARRY YOUR HEART IN YOUR HEAD, THEN CHANGES BECOME POSSIBLE. SOUNDS SIMPLE AND BEAUTIFUL, BUT HOW TO DO IT?

You must be like a child which is still anchored in the heart and thinks with the heart. You must keep the ability to learn from your mistakes. People who can admit they made a mistake and learn from it carry the heart in their head. In the book "The Little Prince", Antoine de Saint-Exupéry described it so beautifully: "We children think with our hearts. You only see well with your heart. The essential is invisible to the eyes." Wilhelm Reich put it in a nutshell: the opposite of love is not hate but fear. Fear takes place in the head, stirs up comparison, dissatisfaction, illness and war. It individualizes; love, on the other hand, is connected with everything! Like when you're in love and you want to embrace the whole world.

The interview was conducted by Corinne Gut Klucker, www.gutklucker.ch, in Davos as part of the 8th consciousness symposium 2019 "Pioneers of the New Age", www.starfire-college.ch.
